

Benefits of da Vinci Surgery

The da Vinci System puts the surgeon's hands at the controls of a state-of-the-art robotic platform with 3D, high-definition vision and miniaturized, wristed instruments designed to help doctors take surgery beyond the limits of the human hand. The da Vinci system enables surgeons to perform even the most complex and delicate procedures through very small incisions with unmatched precision. All surgeries are performed with a team of highly skilled and trained medical professionals.

da Vinci Hysterectomy

Traditional gynecologic surgery, using a large incision for access to the uterus and surrounding anatomy, has been the standard approach. It can also include significant pain, trauma, a long recovery process and possible damage to surrounding organs and nerves.

For complex hysterectomies and other gynecologic procedures, robot-assisted surgery may be the most effective, least invasive treatment option. Through tiny, 1-2 cm incisions, surgeons using the da Vinci robots operate with greater precision and control, minimizing the pain and risk while increasing the likelihood of a fast recovery and excellent clinical outcomes.
